## DETAILED ACTION

### *Allowable Subject Matter*

1. Claims 57 and 59-66 are allowed.
2. The following is an examiner's statement of reasons for allowance: The prior art fails to teach or render obvious the invention as essentially claimed.
3. Lawrence et al. (U.S. Pub. No. 2002/0197522), Christine et al. (U.S. Pat. No. 5,390,814), and Okamoto et al. (U.S. Pat. No. 5,830,599) were considered most pertinent to applicant's disclosure.

Lawrence et al. discloses a method for sealing a fuel supply (39a, fig. 10), wherein the fuel supply (39) comprises a valve (128; figs. 12a, 12b), an outer casing (92a) including a first opening (opening through which valve 88a of valve 128 extends), and an inner liner (86a) including a second opening (opening though which valve 88a is fluidly connected to), the method comprising the steps of: inserting the valve (128) of the fuel supply (39a) into the second opening of the inner liner (86a); attaching the valve (128, thru portion 88a) to the inner liner (86a); securing the inner liner (86a) and valve (128) to the outer casing (92a); and attaching the valve (128) to the outer casing (92a) (the valve is attached to the inner liner which is attached to the outer casing). However, Lawrence does not disclose wherein the valve is attached to the inner liner by press-fitting and wherein the valve is attached by heat to the outer casing by ultrasonic welding.

Christine et al. teach the method of attaching an inner liner (12, 38; fig. 1; 38 is attached to liner 12 and to valve 16, thereby 12 is attached to the valve 16) to a fitment

Art Unit: 3753

including a valve (16) by press-fitting. However, Christine et al. do not teach wherein the valve is attached by heat to the outer casing by ultrasonic welding.

Okamoto et al. teach a cell having a valve (9) attached to an outer casing (4, 3) by ultrasonic welding (col. 4, line 39). However, since the valve material taught in Christine is a "not easily heat sealable" material and the outer casing taught in Christine is made from paper, Christine teaches away from a combination with Okamoto. Christine further teaches in column 5 that the materials selected for the valve/fitment 16 to have high barrier properties similar to inner liner (12) are "unfortunately ... not easily heat sealable." This further teaches away from sealing by heat.

Lawrence discloses in paragraph [0093] that its outer casing can be made from anodized aluminum and stamped sheet metal, which are difficult to melt due to the high melting temperature of metals, and polycarbonate, but fails to teach the material of the valve 88a. Hence, Lawrence cannot resolve the differences between Christine and Okamoto. Further, none of the references disclose or make obvious for the press-fitting connection to cause the second opening of the inner liner to be placed outward toward the outer casing by the valve body for improving the retention of the inner liner inside the outer casing. Such modification would require substantial modification to the method of sealing Lawrence's fuel supply valve to the outer casing.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
